

TRANSPORTATION

Transportation

Transportation means the conveyance of goods and passengers from one place to another. It removes the hindrances of place.

Types of Transportation

- Land Transport
- Water Transport
- Air Transport

Land Transport

Land transport is divided in to road transport, rail transport and pipeline transport.

1. Road Transport

This is the oldest and simplest form of transport. It is largely used for carrying goods as well as passengers over a short distance.

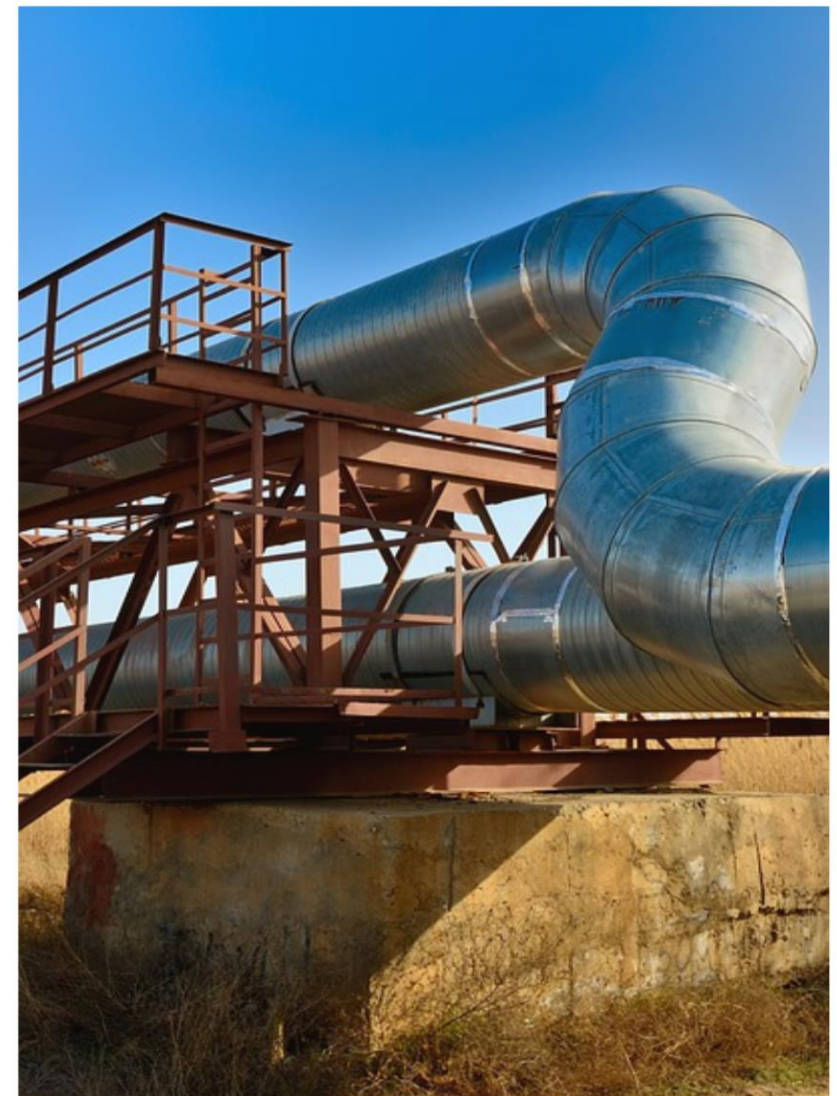

2. Rail Transport

Rail transport is a cheap and quick form of transportation for carrying goods and services over long distance.

3. Pipeline Transport

This mode of transport is exclusively suited for transportation of liquids and gases.

Water Transport

Water transport is the cheapest form of transport. It is broadly divided in inland and ocean transport.

1. Inland Transport

Inland transport refers to transportation through canals, rivers etc. It is deal for transportation of goods in small lots between villages and local markets.

2. Ocean Transport

Ocean transport is the carriage of goods and passengers through oceans. It helps the growth of international trade.

Air Transport

This is the fastest mode of transport. It is used for the movement of passengers and goods having less volume but high value. It has the advantages of high speed.

A photograph of a busy city street, likely in New York City, featuring tall buildings and a yellow taxi in the foreground. The taxi's roof sign displays the number "4K72". The text "THANK YOU" is overlaid in the center of the image.

THANK YOU
